 Curitiba, Paraná, Brazil

Summary

Senior Data Engineer with 10+ years of building, migrating, and operating Big Data platforms (and 20+ years in software engineering), specializing in Hadoop ecosystems, cloud data lakes, and analytics delivery layers with Snowflake and Click House across GCP, AWS, Azure, and OCI. Led the end-to-end migration of a ~100 TB Hadoop Data Lake from OCI to GCP with zero downtime, reducing monthly operational costs by 40% and cutting infrastructure from 35 to 18 servers.

Experienced in implementing Snowflake as a primary data delivery layer (including enablement/training), and in building high-scale data products such as a Hadoop + Mahout recommendation platform at Buscapé (supporting a major share of Brazil's e-commerce traffic). Strong background in streaming and real-time pipelines (Kafka/Spark/HDFS), performance tuning, reliability, and cross-functional collaboration to turn data into measurable business outcomes.

Core Skills: Data Platform Modernization, Cloud & Migration (Hadoop→Cloud), Lakehouse Architecture (Medallion), Data Pipelines (ETL/ELT, Batch/Streaming), Data Reliability Engineering, Orchestration (Airflow), Streaming (Kafka), Advanced SQL & Data Modeling, Python, Java, Performance Tuning & Cost Optimization (FinOps), Data Quality & Governance.

Experience

Data Engineer

Azuris

Curitiba (hybrid) 06/2022 – Present

As a Data Engineering and Developer, my main duties have been to design, build and operate scalable data platforms, leading migrations and training teams while aligning technical solutions with business goals.

- Designed, built, and operated scalable data platforms for multiple client companies, aligning data architecture with business goals and analytics needs.
- Led cloud modernization and large-scale data platform migrations across AWS, GCP, OCI, and Azure, selecting the appropriate stack per use case and driving adoption with engineering teams.
- Delivered end-to-end datalake/lakehouse architectures, from ingestion and pipelines to analytics-ready datasets, with strong focus on cost optimization, reliability, and SLA.
- Implemented high-performance data solutions using Snowflake, Databricks, Click House, and Gaio Data OS, including architecture design, PoCs, and production hardening.
- Focused on cost optimization and reliability (right-sizing, storage/compute strategy, performance tuning, pipeline stabilization) to reduce platform spending and improve SLA.
- Acted as a technical reference and mentor, enabling data teams in organizations such as Unimed and Megadata through hands-on delivery and best-practice guidance.

Skills: AWS, GCP, OCI, Azure, Snowflake, Databricks, Click House, Gaio Data OS, Hadoop (HDFS, Hive, MapReduce), Spark, Airflow, Kafka, NiFi, SQL, Python.

Data Engineer & Conference Founder

Tecpar – Paraná Institute of Technology

Curitiba (hybrid) 2018/2025

Founder and organizer of Data Science Summit Brasil (www.DSSBR.com.br), one of the largest Data & AI conferences in Brazil, connecting companies, experts, and the data community since 2018.

- Designed and curated the educational program, defining learning tracks and ensuring high-quality technical and business content across talks, workshops, and roundtables.
- Coordinated institutional partners, speakers, and sponsors, fostering collaboration between industry, startups, academia, and government.

Skills: Ecosystem Building, Community Leadership, Program Curation, Technical Evangelism, Partnership Development, Sponsorship Management, Speaker Management, Stakeholder Management, Curriculum Design, Public Speaking.

Data Engineer Trainer

Logcomex |

Curitiba (onsite) 08/2025 – 11/2025

Designed and delivered hands-on Big Data and Lakehouse training programs, addressing real production challenges such as data quality, pipeline reliability, governance, and cost optimization. Enabled data teams to define modernization roadmaps through applied labs, demos, and active learning methodologies.

Skills: Lakehouse Architecture, Data Platform Modernization, Data Reliability Engineering, Data Pipelines (ETL/ELT – Sqoop), Data

Quality & Observability(Great Expectations), Medallion Architecture, Orchestration (Airflow), Batch & Streaming Data(NiFi), Event Streaming (Kafka/Redpanda), Table Formats (Delta Lake, Iceberg), Query Engines (Trino/Starburst), Object Storage (MinIO), Training & Enablement, Hands-on Labs & Demos, Data warehouse (Click House).

Data Engineer Trainer

Sicredi

Curitiba (onsite) 04/2025 – 06/2025

Led a large-scale data engineering and AI training program for professionals across multiple business units, guiding teams from spreadsheet-based workflows to production-grade data pipelines.

Skills: Corporate Training Delivery, Data Lake / Lakehouse, Data Pipeline Architecture, ETL / ELT, Batch Pipelines, Data Ingestion, Data Integration, Data Cleaning, Data Transformation, Data Standardization, Data Modeling (Columnar), SQL, Python, Click House, Performance Tuning, Data Layers (Raw/Bronze/Silver/Gold), Analytics Data Serving, BI Integration (Power BI)

Data Engineer

Resultados Digitais (RDStation.com)

Florianópolis (Hybrid) | Apr 2020 – Feb 2024

Stabilized and modernized a critical Hadoop-based data platform after a failed cloud migration, restoring reliability for executive dashboards and decision-support pipelines.

Led the end-to-end migration of a ~100 TB Hadoop Data Lake from OCI to Google Cloud with zero downtime, introducing Snowflake as the analytics delivery layer.

Optimized HDFS performance and cost (filesystem layout, block sizing, service distribution, hardware/software tuning), improving overall cluster performance by 25% and reducing monthly operational costs by 30%.

Reduced infrastructure footprint from 35 to 18 servers, cutting monthly costs by 40% and avoiding significant tool migration expenses.

Skills: Hadoop (HDFS, Hive, Spark), Airflow, NiFi, Presto/Trino, Kafka, OCI, GCP, AWS, Linux, Atlas, Kubernetes, Elasticsearch, HBase, MongoDB, Sqoop, Python, SQL, GCP services, Cloudera, Databricks, Snowflake.

Professor - Big Data Graduate Program

Positivo University

Curitiba (onsite) 01/2015 – 01/2018

Co-created and taught one of the first Big Data graduate programs in Paraná, designing curriculum and delivering courses on Hadoop, Spark, distributed processing, and large-scale data architectures.

Skills: Hadoop, HDFS, MapReduce, Java, Apache Spark, Scala, Hive HQL, Pig, AWS EMR, Distributed Computing, Batch Processing, Data Ingestion, ETL / Data transformation, SQL, Data Loading, Mahout (ML on Hadoop)

Research And Development Engineer (Data Engineering)

Buscapé Group (eBehaviour acquisition)

São Paulo (onsite) – 11/2009 – 05/2012

Built and scaled an early Hadoop-based recommendation platform supporting high-volume Brazilian e-commerce traffic, laying the foundation for large-scale data processing and analytics. Designed and deployed the Hadoop cluster (compiled from source in the pre-distribution era), enabling scalable batch processing for large recommendation workloads.

Skills: Hadoop (HDFS, MapReduce), Java, Mahout, Pig, SQL, Linux, SQL Server, Cassandra, C#.

Licenses & certifications

-
- **Oracle Big Data Case** – official success story with RD Station on Oracle Cloud Infrastructure (2021)
 - **Represented Resultados Digitais at Snowflake Summit (Las Vegas)**, connecting with global data leaders and bringing back insights on modern cloud data platforms and Lakehouse best practices.
 - **Microsoft Xamarin Developer and Professional Certified** – Xamarin Developer (Mobile Development Android and IOS), 2018

Education

M.Sc. in Technology (Project Management & Innovation) – Federal University of Technology – Paraná (UTFPR), 2003–2006

B.Sc. in Data Processing (Computer Engineering emphasis) – ESEEI University, 1998–2001

Technical Degree in Electronics – Federal Center for Technological Education of Paraná (CEFET-PR / UTFPR), 1992–1996

Language

English: Full professional proficiency - **Portuguese:** Native - **Spanish:** basic
